Mathematical finance, also known as quantitative finance, is a field of applied mathematics, concerned with mathematical modeling of financial markets. Generally, mathematical finance will derive and extend the mathematical or numerical models without necessarily establishing a link to financial theory, taking observed market prices as input. . Mathematical consistency is required, not ...

e-books in Finance category How Noise Matters to Finance by N. Adriana Knouf - University of Minnesota Press, 2016 Knouf shows how noise affects the ways in which financial markets function. The book draws on different forms of noise, paying attention to how materiality and the interference of humans causes the meanings of noise to shift over space and time.

Algorithmic trading is a method of executing a large order (too large to fill all at once) using automated pre-programmed trading instructions accounting for variables such as time, price, and volume to send small slices of the order (child orders) out to the market over time. They were developed so that traders do not need to constantly watch a stock and repeatedly send those slices out manually.
