It's Ecosystems, Not Inventions That Truly Change the World

Ecosystems – such as forests, wetlands and grasslands – are a critical part of the global water cycle. All freshwater ultimately depends on the continued healthy functioning of ecosystems, and recognizing the water cycle as a biophysical process is essential to achieving sustainable water management.

Ecosystems | UN-Water

Context - Human well-being is highly dependent on ecosystems and the benefits they provide such as food and drinkable water. Over the past 50 years, however, humans have had a tremendous impact on their environment. To better understand the consequences of current changes to ecosystems and to evaluate scenarios for the future, UN Secretary General Kofi Annan has launched a comprehensive ...

Scientific Facts on Ecosystem Change

The ocean covers more than two-thirds of our living planet's surface and is home to spectacular ecosystems and treasured wildlife. No matter where you live, you're never far from the ocean's reach. The value of the marine world goes well beyond biodiversity—the ocean sustains the lives of more than 1 billion people, regulates our climate, produces half the oxygen we breathe, and fuels ...

Coral reefs are rich in life, but are dying around the world. This page explores some of the problems in further detail.

Coral Reefs — Global Issues

Human society and the global economy are inextricably linked to forests. More than 1 billion people depend on forests for their livelihoods. And forest ecosystems play a critical role in stabilizing the climate; providing food, water, wood products, and vital medicines; and supporting much of the world's biodiversity. Despite decreased deforestation rates in some regions,

The Aqeduct™ tools enable users to measure, map, and mitigate water risks around the world with its open-source, and high-resolution platform. It uses multiple data layers to display water risks at any given location. Current water risks can be compared to those in the future, to visualize trends for optimistic, pessimistic, or business-as-usual climate and growth scenarios.
