mysterious island. I had an old copy of MI. Way back in 1961 I read the book and was facinated. I had some doubts: What is Brqueral cell, what is the real motive power of Nautilus, how the islanders could survive the tremendous heat and other problems of the volcanic eruption and how the telegraphic messages were sent and recieved.

But the delta V cost breakdown is interesting. Getting into orbit takes just a little bit of delta V. It is making sure you stay in space that takes a freaking lot of delta V.. A little sounding rocket can easily rise from 50 to 1,500 kilometers above Terra's surface, where outer space starts about 150 kilometers up. Then the propellant runs out, and the poor little rocket finds itself ...
