

Natural Management Of Tropical Moist Forests By Francois Mergen

Natural Management Of Tropical Moist

A tropical cyclone is a rapidly rotating storm system characterized by a low-pressure center, a closed low-level atmospheric circulation, strong winds, and a spiral arrangement of thunderstorms that produce heavy rain. Depending on its location and strength, a tropical cyclone is referred to by different names, including hurricane (/ ' h ʌ r ɪ k ə n, -k eɪ n /), typhoon (/ t aɪ ' f u: n ...

Types of tropical forest. Tropical forests are often thought of as evergreen rainforests and moist forests, however in reality only up to 60% of tropical forest is rainforest (depending on how this is defined - see maps). The remaining tropical forests are a diversity of many different forest types including: seasonally-dry tropical forest, mangroves, tropical freshwater swamp forests (or ...

Tropical Dry Forest of Costa Rica A biodiversity specially adapted to the seasonal drought. The Tropical Dry Forest is the most threatened terrestrial environment in Costa Rica, and one of the most scarce in Central America (), which is not a surprise because of its main feature, as being located in a tropical region with markedly seasonal rainfalls, this results in several months of severe ...
