Calcite Mineral Data

Calcite is a carbonate mineral and the most stable polymorph of calcium carbonate (CaCO₃). The Mohs scale of mineral hardness, based on scratch hardness comparison, defines value 3 as "calcite".. Other polymorphs of calcium carbonate are the minerals aragonite and vaterite. Aragonite will change to calcite over timescales of days or less at temperatures exceeding 300 °C, and vaterite is even ...

X-ray crystallography (XRC) is a technique used for determining the atomic and molecular structure of a crystal, in which the crystalline structure causes a beam of incident X-rays to diffract into many specific directions. By measuring the angles and intensities of these diffracted beams, a crystallographer can produce a three-dimensional picture of the density of electrons within the crystal.

Classification générale. Au début du XIX e le chimiste Berzelius, dans son Nouveau système de minéralogie [1], propose une classification prenant en compte la composition chimique des minéraux. Elle est améliorée notamment par Dana au cours du XIX e puis par Strunz au XX e en bénéficiant des progrès de la chimie analytique et de la cristallographie.
