The advances in MDCT, changes in image review from hard-copy film to workstations, and the use of the cine mode have dramatically improved our sensitivity to small solid lesions. 9 In addition,

sensitivity in detection of nonsolid and semisolid lesions has increased. It is widely accepted that CT scanning is a sensitive but nonspecific modality in assessing metastatic disease.

1. Introduction. In recent years, laparoscopic and robotic nephroureterectomy (NU) have become the preferred minimally invasive procedures used in the surgical treatment of upper tract urothelial cancer (UTUC) .An increasing body of evidence suggests that laparoscopic NU (LNU) has similar oncologic outcomes compared to the open technique , ,
